

### Description:

The Open Access Journals Library is the world's most ambitious attempt to make every single OA Journal Article written in English from anywhere in the world fully discoverable and usable in one search box. The Open Access Journals Library relies on a team of 100+ full time library professionals who for the last 10 years have been aggregating article level Meta data for already 17,000 journals. Most of the information has to be gathered and cataloged manually because the majority of OA publishers do not follow a standardized format. This results in a time consuming and tedious hard work to make 7 Million Open Access Journal Articles fully discoverable. Furthermore, The Open Access Journals Library empowers its users with state of the art discovery technology, which allows for a level of data mining not available till now in the industry for open access materials.

### The Open Access Journals Library Key Features:

- 7,000,000 OA Journal Articles
- 17,000 OA Journals
- 120 Countries
- 100 Years of publications: From 1914 till 2014
- All in English language
- All major subjects covered.
